EDUCATION

GLA University, Mathura

2023 – 2027

B.Tech, Computer Science (Software Engineering) · CPI: 6.9 / 10

INTERNSHIP

Web Development Intern · CodeSquadz (Appsquadz Software Pvt. Ltd.)

Jun – Jul 2024

- Completed a 6-week project-based internship; built and delivered frontend features using HTML, CSS, and JavaScript, with code reviewed against production standards.

PROJECTS

DevBridge — Developer Networking & Real-Time Chat | *Node.js · Express · MongoDB · Socket.io · React · JWT · AWS EC2*

- Implemented stateless JWT authentication via HTTP-only cookies; wrote an Express middleware layer that verifies tokens, extracts user context, and blocks unauthenticated access on all protected routes.
- Designed a connection lifecycle API across domain-separated routers handling state transitions (pending → accepted/rejected), feed exclusion for existing connections, and relationship graph queries.
- Built Socket.io-based messaging using deterministic room IDs derived from sorted participant pairs; messages are persisted in MongoDB with a capped history replay of the last 50 messages on reconnect.
- Deployed on AWS EC2 with environment-scoped configuration; aligned CORS origin whitelisting across both REST and WebSocket layers to maintain consistent cookie-based identity in production.

URLShort — URL Shortener & Click Analytics Platform | *Node.js · Express · MongoDB · Redis · React · JWT*

- Built collision-safe short-code generation using nanoid with a DB uniqueness check loop; indexed the slug field in MongoDB for efficient single-query redirect resolution.
- Added Redis caching for frequently accessed slugs; cached redirects are served without hitting MongoDB, reducing read latency on repeat visits.
- Collected per-redirect analytics (timestamp, IP, user-agent, device type, referrer) stored per-URL document for dashboard aggregation and reporting.
- Protected all dashboard routes with JWT middleware; supports optional custom aliases and expiration dates, scoped strictly to the authenticated user's account.

TECHNICAL SKILLS

Languages: JavaScript (ES6+)

Backend: Node.js, Express.js, REST API Design, JWT Authentication, Socket.io, Middleware Architecture

Frontend: React, Vite, Tailwind CSS

Databases: MongoDB (Mongoose ODM), Redis

Cloud & Tools: AWS EC2, Git, GitHub, npm
