EDUCATION

GLA University, Mathura – B.Tech, Computer Science (Software Engineering)

Aug 2023 – May 2027

CPI: 7.02 / 10

ACHIEVEMENTS & CODING PROFILE

- Solved **370+ DSA problems** across LeetCode and other coding platforms; focus areas include arrays, graphs, trees, and dynamic programming.

INTERNSHIP

Web Development Intern – CodeSquadz (Appsquadz Software Pvt. Ltd.)

Jun – Jul 2024

- Built and delivered frontend modules using **HTML, CSS, and JavaScript**; code reviewed against production standards with structured feedback cycles across a 6-week sprint.
- Worked within an existing production codebase; implemented assigned features end-to-end from requirement to final review.

PROJECTS

DevBridge – Developer Networking & Real-Time Chat

Stack: Node.js · Express · MongoDB · Socket.io · React · JWT · AWS EC2

- **JWT auth via HTTP-only cookies:** custom Express middleware verifies tokens, extracts user context, and enforces authentication on all protected routes.
- **Connection lifecycle API:** manages state transitions (pending → accepted / rejected), feed exclusion for existing connections, and relationship graph queries across domain-separated routers.
- **Real-time messaging with Socket.io:** deterministic room IDs derived from sorted participant pairs; messages persisted in MongoDB with capped 50-message history replay on reconnect.
- Deployed on **AWS EC2**; CORS origin whitelisting aligned across REST and WebSocket layers to maintain consistent cookie identity in production.

URLShort – URL Shortener & Click Analytics Platform

Stack: Node.js · Express · MongoDB · Redis · React · JWT

- **Cache-aside with Redis:** cached slugs served without hitting MongoDB on repeat lookups; graceful fallback to DB on Redis timeout prevents hard failures under cache unavailability.
- **Async analytics pipeline:** per-redirect events (timestamp, IP, user-agent, device, referrer) recorded without blocking redirect response; aggregated per-URL for dashboard reporting.
- **Layered backend architecture:** validation middleware, centralized error handling, and structured request logging with consistent error shape across all routes.
- Collision-safe **short-code generation via nanoid** with DB uniqueness check; slug field indexed for efficient redirect resolution. Supports custom aliases and expiry scoped to authenticated users.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript
- **Backend:** Node.js, Express.js, REST API Design, JWT Authentication, Socket.io, Middleware Architecture, Redis
- **Frontend:** React, Vite, Tailwind CSS
- **Databases:** MongoDB (Mongoose ODM), Redis
- **Cloud & Tools:** AWS EC2, Git, GitHub, npm
- **Core Concepts:** Data Structures & Algorithms
